

Raidiam Connect

The Enterprise-Grade API Trust Platform

The Secure, Scalable Trust Platform for Securing APIs

Raidiam Connect is a SaaS Trust Platform designed to facilitate secure resource/API ecosystems. It provides five key functions:

- A centralized identity provider (IDP)

- An onboarding workflow

- A complete directory of organisations and applications

- Self-service application registration

- A managed Certificate Authority

A central directory of organisations, applications, and APIs is complemented by robust public key infrastructure (PKI) capabilities, enabling certificate-based authentication and authorization for API access. Raidiam's comprehensive solution enables stakeholders to securely expose and consume APIs with confidence, already underpins some of the world's largest open banking and open data ecosystems - supporting over 1,000 banks around the world.

Challenges we address

Client Management

Handling onboarding, organizational lifecycle, and offboarding.

Authentication Credential Management

Issues with credential creation, rotation, and permissioning. Enabling revocation and facilitating audits.

Stakeholder Management

Providing assurance to customers, certification bodies, regulators, and investors through conformance with standards like FAPI 2.0.

Key Features

Proven scalability and use as national infrastructure.

Staff recognized as experts in Trust, PKI, and API Security.

Full-featured UI and API for customer and staff use.

Self-service management and API integration for rapid deployment.

Operational control plane for integration management.

High availability managed infrastructure.

Compliance with FAPI, ISO, SOC2, and PCI DSS.

Credential Management

Raidiam Connect supports advanced credential management using non-shareable, asymmetric credentials. Key processes include:

Creation

Org/app registration, certificate minting, and automatic integration with authorization servers.

Management

Self-service or automated credential cycling, role assignment, and RBAC/ ABAC permissioning.

Access Control and Offboarding

Access restriction via UI, RBAC metadata federation, certificate revocation, and org-level deactivation.

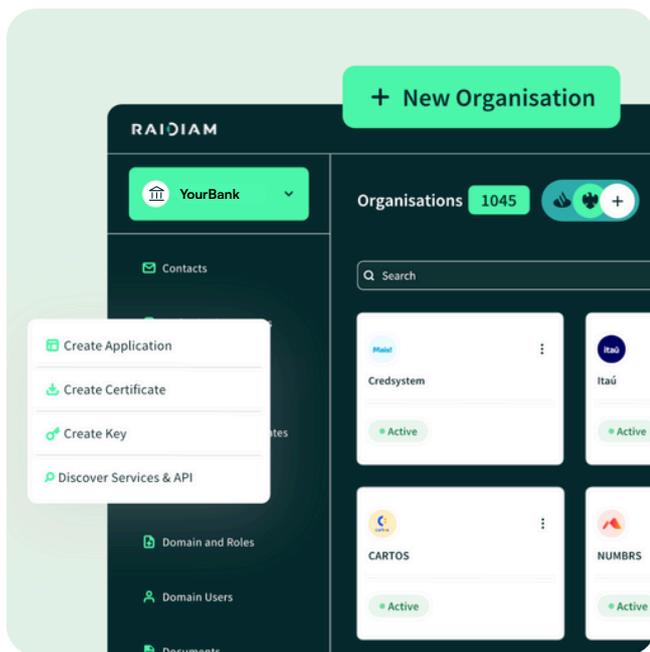

Summary

Raidiam Connect delivers value by enabling secure, scalable API ecosystems. Business benefits include rapid time-to-market, proven reliability, and global deployment. Operationally, it offers a full control plane with API and UI access, while its high availability ensures resilience. Security advantages stem from strong credential practices, asymmetric authentication and encryption, standards compliance, and expert-backed design. Our approach simplifies onboarding and service advertisement while ensuring standards compliance and trust.

Discoverability

Raidiam Connect's Trust Framework enhances discoverability in multi-host ecosystems through a centralized directory, offering both human-readable UI and feature-rich API. It lists accredited participants and services, enabling efficient relationship formation and service access. This centralized approach simplifies onboarding and service advertisement while ensuring accreditation and trust.
